VOA
USIA

December 8, 1987

Dear Mr. Burrows:

Thank you for your reception report of October 21, 1987, and the enclosed tape. We can confirm that what you heard around 8:07 P.M. on 1580 kHz was a portion of our English broadcast to the Caribbean. The transmission came from our Antigua Relay Station.

The relay station on Antigua operates at 50 kilowatts with a three tower directional array - beaming almost directly South - in order to provide protection to other stations on the frequency and maximize coverage of our intended target area. Programs are broadcast from this facility between 0000 and 0400 UTC daily and are fed from our studios in Washington to Antigua via satellite.

I hope this information answers your questions and that you continue to enjoy the hobby of radio listening.

Sincerely,

Walter La Fleur
